The manuals for this product are divided into two parts. This manual (the *User's Manual*) takes you through the steps of readying your camera for use, taking pictures, and viewing them. Complete information on such topics as **P**, **S**, **A**, and **M** modes, playback, copying pictures to a computer, printing pictures, viewing pictures on TV, camera menus, troubleshooting, and optional flash units may be found in the *Reference Manual*, which is available in PDF format on the supplied reference CD. The *Reference Manual* can be viewed using Adobe Reader or Adobe Acrobat Reader 5.0 or later, available for free download from the Adobe website.

1. Start the computer and insert the reference CD.
2. Double-click the CD (Nikon D3000) icon in Computer or My Computer (Windows) or on the desktop (Macintosh).
3. Double-click the INDEX.pdf icon to display a language selection screen and click a language to display the *Reference Manual*.

Additional information on camera menus and other topics can be found using the camera's on-board help system as described on page 7 of this guide.

---

**For Your Safety**

Before using the camera for the first time, read the safety instructions in “For Your Safety” (ii–iv).

**Digitutor**

"Digitutor", a series of “watch and learn” manuals in movie form, is available from the following website: [http://www.nikondigitutor.com/index_eng.html](http://www.nikondigitutor.com/index_eng.html)

**Life-Long Learning**

As part of Nikon's “Life-Long Learning” commitment to ongoing product support and education, continually-updated information is available on-line at the following sites:

- **For users in the U.S.A.**: [http://www.nikonusa.com/](http://www.nikonusa.com/)
- **For users in Europe and Africa**: [http://www.europe-nikon.com/support/](http://www.europe-nikon.com/support/)
- **For users in Asia, Oceania, and the Middle East**: [http://www.nikon-asia.com/](http://www.nikon-asia.com/)

Visit these sites to keep up-to-date with the latest product information, tips, answers to frequently-asked questions (FAQs), and general advice on digital imaging and photography. Additional information may be available from the Nikon representative in your area. See the following URL for contact information: [http://imaging.nikon.com/](http://imaging.nikon.com/)

**Trademark Information**

Macintosh, Mac OS, and QuickTime are registered trademarks of Apple Inc. Microsoft, Windows and Windows Vista are either registered trademarks, or trademarks of Microsoft Corporation in the United States and/or other countries. The SD logo is a trademark of the SD Card Association. PictBridge and the SDHC logo are trademarks. Adobe, the Adobe logo, Acrobat, and Adobe Reader are trademarks of Adobe Systems Incorporated. All other trade names mentioned in this manual or the other documentation provided with your Nikon product are trademarks or registered trademarks of their respective holders.
For Your Safety

To prevent damage to your Nikon product or injury to yourself or to others, read the following safety precautions in their entirety before using this equipment. Keep these safety instructions where all those who use the product will read them.

The consequences that could result from failure to observe the precautions listed in this section are indicated by the following symbol:

⚠️ This icon marks warnings. To prevent possible injury, read all warnings before using this Nikon product.

---

**WARNINGS**

⚠️ Keep the sun out of the frame
Keep the sun well out of the frame when shooting backlit subjects. Sunlight focused into the camera when the sun is in or close to the frame could cause a fire.

⚠️ Do not look at the sun through the viewfinder
Viewing the sun or other strong light source through the viewfinder could cause permanent visual impairment.

⚠️ Turn off immediately in the event of malfunction
Should you notice smoke or an unusual smell coming from the equipment or AC adapter (available separately), unplug the AC adapter and remove the battery immediately, taking care to avoid burns. Continued operation could result in injury. After removing the battery, take the equipment to a Nikon-authorized service center for inspection.

⚠️ Do not use in the presence of flammable gas
Do not use electronic equipment in the presence of flammable gas, as this could result in explosion or fire.

⚠️ Keep out of reach of children
Failure to observe this precaution could result in injury.

⚠️ Do not disassemble
Touching the product’s internal parts could result in injury. In the event of malfunction, the product should be repaired only by a qualified technician. Should the product break open as the result of a fall or other accident, remove the battery and/or AC adapter and then take the product to a Nikon-authorized service center for inspection.

⚠️ Do not place the strap around the neck of an infant or child
Placing the camera strap around the neck of an infant or child could result in strangulation.

⚠️ Observe caution when using the flash
- Using the camera with the flash in close contact with the skin or other objects could cause burns.
- Using the flash close to the subject’s eyes could cause temporary visual impairment. Particular care should be observed when photographing infants, when the flash should be no less than one meter (39 in.) from the subject.

⚠️ Using the viewfinder diopter control
When operating the viewfinder diopter control with your eye to the viewfinder, care should be taken not to put your finger in your eye accidentally.

⚠️ Avoid contact with liquid crystal
Should the monitor break, care should be taken to avoid injury due to broken glass and to prevent the liquid crystal from the monitor touching the skin or entering the eyes or mouth.

⚠️ Use appropriate cables
When connecting cables to the input and output jacks, use only the cables provided or sold by Nikon for the purpose to maintain compliance with product regulations.

⚠️ CD-ROMs
CD-ROMs containing software or manuals should not be played back on audio CD equipment. Playing CD-ROMs on an audio CD player could cause hearing loss or damage the equipment.

⚠️ Observe proper precautions when handling batteries
Batteries may leak or explode if improperly handled. Observe the following precautions when handling batteries for use in this product:

- Use only batteries approved for use in this equipment.
- Do not short or disassemble the battery.
- Be sure the product is off before replacing the battery. If you are using an AC adapter, be sure it is unplugged.
- Do not attempt to insert the battery upside down or backwards.
- Do not expose the battery to flame or to excessive heat.
- Do not immerse in or expose to water.
- Replace the terminal cover when transporting the battery. Do not transport or store the battery with metal objects such as necklaces or hairpins.
- Batteries are prone to leakage when fully discharged. To avoid damage to the product, be sure to remove the battery when no charge remains.
- When the battery is not in use, attach the terminal cover and store in a cool, dry place.
- The battery may be hot immediately after use or when the product has been used on battery power for an extended period. Before removing the battery turn the camera off and allow the battery to cool.
- Discontinue use immediately should you notice any changes in the battery, such as discoloration or deformation.
**Observe proper precautions when handling the quick charger**

- Keep dry. Failure to observe this precaution could result in fire or electric shock.
- Dust on or near the metal parts of the plug should be removed with a dry cloth. Continued use could result in fire.
- Do not handle the power cable or go near the charger during thunderstorms. Failure to observe this precaution could result in electric shock.
- Do not damage, modify, or forcibly tug or bend the power cable. Do not place it under heavy objects or expose it to heat or flame. Should the insulation be damaged and the wires become exposed, take the power cable to a Nikon-authorized service representative for inspection. Failure to observe this precaution could result in fire or electric shock.
- Do not handle the plug or charger with wet hands. Failure to observe this precaution could result in electric shock.
- Do not use with travel converters or adapters designed to convert from one voltage to another or with DC-to-AC inverters. Failure to observe this precaution could damage the product or cause overheating or fire.

**Notices**

- No part of the manuals included with this product may be reproduced, transmitted, transcribed, stored in a retrieval system, or translated into any language in any form, by any means, without Nikon's prior written permission.
- Nikon reserves the right to change the specifications of the hardware and software described in these manuals at any time and without prior notice.
- Nikon will not be held liable for any damages resulting from the use of this product.
- While every effort has been made to ensure that the information in these manuals is accurate and complete, we would appreciate it were you to bring any errors or omissions to the attention of the Nikon representative in your area (address provided separately).

**Notices for Customers in the U.S.A.**

**The Battery Charger**

**IMPORTANT SAFETY INSTRUCTIONS—SAVE THESE INSTRUCTIONS**

**DANGER—TO REDUCE THE RISK OF FIRE OR ELECTRIC SHOCK, CAREFULLY FOLLOW THESE INSTRUCTIONS**

For connection to a supply not in the U.S.A., use an attachment plug adapter of the proper configuration for the power outlet if needed. This power unit is intended to be correctly oriented in a vertical or floor mount position.

**Federal Communications Commission (FCC) Radio Frequency Interference Statement**

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/television technician for help.

**CAUTIONS**

**Modifications**

The FCC requires the user be notified that any changes or modifications made to this device that are not expressly approved by Nikon Corporation may void the user’s authority to operate the equipment.

**Interface Cables**

Use the interface cables sold or provided by Nikon for your equipment. Using other interface cables may exceed the limits of Class B Part 15 of the FCC rules.

**Notice for Customers in the State of California**

**WARNING**: Handling the cord on this product may expose you to a chemical known to the State of California to cause birth defects or other reproductive harm. **Wash hands after handling.**

Nikon Inc., 1300 Walt Whitman Road, Melville, New York 11747-3064, U.S.A.
Tel.: 631-547-4200
Notices for Customers in Canada

CAUTION
This Class B digital apparatus complies with Canadian ICES-003.

ATTENTION
Cet appareil numérique de la classe B est conforme à la norme NMB-003 du Canada.

Notice for Customers in Europe

CAUTION
RISK OF EXPLOSION IF BATTERY IS REPLACED BY AN INCORRECT TYPE. DISPOSE OF USED BATTERIES ACCORDING TO THE INSTRUCTIONS.

This symbol indicates that this product is to be collected separately.
The following apply only to users in European countries:
• This product is designated for separate collection at an appropriate collection point. Do not dispose of as household waste.
• For more information, contact the retailer or the local authorities in charge of waste management.

This symbol on the battery indicates that the battery is to be collected separately.
The following apply only to users in European countries:
• All batteries, whether marked with this symbol or not, are designated for separate collection at an appropriate collection point. Do not dispose of as household waste.
• For more information, contact the retailer or the local authorities in charge of waste management.

Disposing of Data Storage Devices
Please note that deleting images or formatting memory cards or other data storage devices does not completely erase the original image data. Deleted files can sometimes be recovered from discarded storage devices using commercially available software, potentially resulting in the malicious use of personal image data. Ensuring the privacy of such data is the user’s responsibility.

Before discarding a data storage device or transferring ownership to another person, erase all data using commercial deletion software, or format the device and then completely refill it with images containing no private information (for example, pictures of empty sky). Be sure to also replace any pictures selected for preset manual white balance. Care should be taken to avoid injury when physically destroying data storage devices.

Use Only Nikon Brand Electronic Accessories
Nikon cameras are designed to the highest standards and include complex electronic circuitry. Only Nikon brand electronic accessories (including battery chargers, batteries, AC adapters, and flash accessories) certified by Nikon specifically for use with this Nikon digital camera are engineered and proven to operate within the operational and safety requirements of this electronic circuitry.

The use of non-Nikon electronic accessories could damage the camera and may void your Nikon warranty. The use of third-party rechargeable Li-ion batteries not bearing the Nikon holographic seal shown at right could interfere with normal operation of the camera or result in the batteries overheating, igniting, rupturing, or leaking.

For more information about Nikon brand accessories, contact a local authorized Nikon dealer.

Notice Concerning Prohibition of Copying or Reproduction

Note that simply being in possession of material that has been digitally copied or reproduced by means of a scanner, digital camera, or other device may be punishable by law.

• Items prohibited by law from being copied or reproduced
Do not copy or reproduce paper money, coins, securities, government bonds, or local government bonds, even if such copies or reproductions are stamped “Sample.”
The copying or reproduction of paper money, coins, or securities which are circulated in a foreign country is prohibited.
Unless the prior permission of the government has been obtained, the copying or reproduction of unused postage stamps or post cards issued by the government is prohibited.
The copying or reproduction of stamps issued by the government and of certified documents stipulated by law is prohibited.

• Cautions on certain copies and reproductions
The government has issued cautions on copies or reproductions of securities issued by private companies (shares, bills, checks, gift certificates, etc.), commuter passes, or coupon tickets, except when a minimum of necessary copies are to be provided for business use by a company. Also, do not copy or reproduce passports issued by the government, licenses issued by public agencies and private groups, ID cards, and tickets, such as passes and meal coupons.

• Comply with copyright notices
The copying or reproduction of copyrighted creative works such as books, music, paintings, woodcuts, prints, maps, drawings, movies, and photographs is governed by national and international copyright laws. Do not use this product for the purpose of making illegal copies or to infringe copyright laws.
Introduction

Overview
Thank you for your purchase of a Nikon single-lens reflex (SLR) digital camera. This manual takes you through the steps of readying your camera for use, taking pictures, and viewing them.

Symbols and Conventions
To make it easier to find the information you need, the following symbols and conventions are used:

- This icon marks cautions; information that should be read before use to prevent damage to the camera.
- This icon marks notes; information that should be read before using the camera.
- This icon marks references to other pages in this manual.

Use Only Nikon Brand Accessories
Only Nikon brand accessories certified by Nikon specifically for use with your Nikon digital camera are engineered and proven to operate within its operational and safety requirements. THE USE OF NON-NIKON ACCESSORIES COULD DAMAGE YOUR CAMERA AND MAY VOID YOUR NIKON WARRANTY.

Servicing the Camera and Accessories
The camera is a precision device and requires regular servicing. Nikon recommends that the camera be inspected by the original retailer or a Nikon-authorized service representative once every one to two years, and that it be serviced once every three to five years (note that fees apply to these services). Frequent inspection and servicing are particularly recommended if the camera is used professionally. Any accessories regularly used with the camera, such as lenses or optional flash units, should be included when the camera is inspected or serviced.

Before Taking Important Pictures
Before taking pictures on important occasions (such as at weddings or before taking the camera on a trip), take a test shot to ensure that the camera is functioning normally. Nikon will not be held liable for damages or lost profits that may result from product malfunction.

Camera Settings
The explanations in this manual assume that default settings are used.
Getting to Know the Camera

Take a few moments to familiarize yourself with camera controls and displays. You may find it helpful to bookmark this section and refer to it as you read through the rest of the manual.

The Camera Body

1. Mode dial .................................. 4
2. Focal plane mark (→) .......................... 4
3. i (information) button ................. 6
4. Exposure compensation button
   (aperture) button
   Flash compensation button
5. Shutter-release button ............. 21
6. Power switch............................. 3
7. AF-assist illuminator
   Self-timer lamp.......................... 40
   Red-eye reduction lamp ..... 44
8. Infrared receiver
9. Body cap
10. CPU contacts
11. Built-in flash.......................... 42
12. Flash mode button
   Flash compensation button
13. Eyelet for camera strap
14. Connector cover
15. (self-timer) button
   (function) button
16. Mounting index .................. 12
17. Lens release button
18. Mirror
19. Lens mount

21. Accessory shoe (for optional flash unit)
22. VIDEO-OUT connector
23. Reset switch
24. USB connector
The Power Switch

Rotate the power switch as shown to turn the camera on.

Rotate the power switch as shown to turn the camera off.
### The Mode Dial

The camera offers a choice of the following modes:

#### P, S, A, and M Modes
Select these modes for full control over camera settings.

<table>
<thead>
<tr>
<th>Mode</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>P—Programmed auto:</td>
<td>Camera chooses shutter speed and aperture, user controls other settings.</td>
</tr>
<tr>
<td>S—Shutter-priority auto:</td>
<td>Choose fast shutter speeds to freeze action, slow shutter speeds to suggest motion by blurring moving objects.</td>
</tr>
<tr>
<td>A—Aperture-priority auto:</td>
<td>Adjust aperture to soften background details or increase depth-of-field to bring both main subject and background into focus.</td>
</tr>
<tr>
<td>M—Manual:</td>
<td>Match shutter speed and aperture to your creative intent.</td>
</tr>
</tbody>
</table>

#### GUIDE Mode
GUIDE (127): Take and view pictures and adjust settings with the help of an on-screen guide.

#### Auto Modes
Select these modes for simple, point-and-shoot photography.

<table>
<thead>
<tr>
<th>Mode</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Auto (17):</td>
<td>Camera adjusts settings automatically to produce optimal results with “point-and-shoot” simplicity. Recommended for first-time users of digital cameras.</td>
</tr>
<tr>
<td>Auto (flash off) (17):</td>
<td>As above, except that the flash will not fire even when lighting is poor.</td>
</tr>
</tbody>
</table>

#### Scene Modes
Selecting a scene mode automatically optimizes settings to suit the selected scene.

<table>
<thead>
<tr>
<th>Mode</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Portrait (22):</td>
<td>Shoot portraits with background in soft focus.</td>
</tr>
<tr>
<td>Landscape (22):</td>
<td>Preserve details in landscape shots.</td>
</tr>
<tr>
<td>Child (23):</td>
<td>Create portraits of children. Clothing and background details are vividly rendered while skin tones remain soft and natural.</td>
</tr>
<tr>
<td>Sports (23):</td>
<td>Freeze motion for dynamic sports shots.</td>
</tr>
<tr>
<td>Close up (23):</td>
<td>Take vivid close-ups of flowers, insects, and other small objects.</td>
</tr>
<tr>
<td>Night portrait (23):</td>
<td>Shoot portraits against a dimly-lit backdrop.</td>
</tr>
</tbody>
</table>
The Viewfinder

<table>
<thead>
<tr>
<th>No Battery</th>
</tr>
</thead>
<tbody>
<tr>
<td>When the battery is exhausted or no battery is inserted, the display in the viewfinder will dim. This is normal and does not indicate a malfunction. The viewfinder display will return to normal when a fully-charged battery is inserted.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>The Viewfinder Display</th>

</tbody>
</table>
The Information Display

Shooting information, including shutter speed, aperture, and the number of exposures remaining, is displayed in the monitor when the 
button is pressed. To clear information from the display, press the 
button again. Note that the monitor turns off automatically while the shutter-release is pressed or if no operations are performed for 8 s (the default value). The information display can be restored by pressing the 
button.

Changing Settings in the Information Display

To change settings for the items listed in the information display, press the 
button. Highlight items using the multi selector and press 
 to view options for the highlighted item. Some items can also be adjusted using the command dial and camera buttons.
Camera Menus

Most shooting, playback, and setup options can be accessed from the camera menus. To view the menus, press the MENU button.

Tabs
Choose from the following menus:
- • D: Playback
- • N: Retouch
- • C: Shooting
- • m: Recent settings
- • B: Setup

If a icon is displayed at the bottom left corner of the monitor, help can be displayed by pressing the ? (W) button. A description of the currently selected option or menu will be displayed while the button is pressed. Press ▲ or ▼ to scroll through the display.

Guide Mode
To display the guide menu, rotate the mode dial to GUIDE (27).

Recent Settings
The recent settings menu lists the twenty most recently used settings.
Using Camera Menus

The multi selector and OK button are used to navigate the camera menus.

Follow the steps below to navigate the menus.

1. **Display the menus.**
   Press the MENU button to display the menus.

2. **Highlight the icon for the current menu.**
   Press ▲ to highlight the icon for the current menu.

3. **Select a menu.**
   Press ▲ or ▼ to select the desired menu.
4 **Position the cursor in the selected menu.**
Press ▶ to position the cursor in the selected menu.

5 **Highlight a menu item.**
Press ▲ or ▼ to highlight a menu item.

6 **Display options.**
Press ▶ to display options for the selected menu item.

7 **Highlight an option.**
Press ▲ or ▼ to highlight an option.

8 **Select the highlighted item.**
Press OK to select the highlighted item. To exit without making a selection, press the MENU button.

Note the following:
- Menu items that are displayed in gray are not currently available.
- While pressing ▶ generally has the same effect as pressing OK, there are some cases in which selection can only be made by pressing OK.
- To exit the menus and return to shooting mode, press the shutter-release button halfway (page 21).

**For More Information**
Information on individual menu options is available using the camera’s on-board help (page 7) and in the *Reference Manual* on the supplied reference CD (for information on viewing the *Reference Manual*, see the inside front cover of this booklet).
First Steps

Charge the Battery
The camera is powered by an EN-EL9a rechargeable Li-ion battery (supplied). To maximize shooting time, charge the battery in the supplied MH-23 quick charger before use. About one hour and forty minutes are required to fully recharge the battery when no charge remains.

1 Plug the charger in.
   Insert the AC adapter plug into the battery charger and plug the power cable into an electrical outlet.

2 Remove the terminal cover.
   Remove the terminal cover from the battery.

3 Insert the battery.
   Insert the battery as shown in the illustration on the charger. The CHARGE lamp will blink while the battery charges.

4 Remove the battery when charging is complete.
   Charging is complete when the CHARGE lamp stops blinking. Remove the battery and unplug the charger.
Insert the Battery

1 Turn the camera off.

![Inserting and Removing Batteries]
Always turn the camera off before inserting or removing batteries.

2 Open the battery-chamber cover.
Unlatch (①) and open (②) the battery-chamber cover.

3 Insert the battery.
Insert the battery as shown at right.

4 Close the battery-chamber cover.

The Battery and Charger
Read and follow the warnings and cautions on pages ii–iii and 50–52 of this manual. Do not use the battery at ambient temperatures below 0°C (32°F) or above 40°C (104°F). Charge the battery indoors at ambient temperatures between 5–35°C (41–95°F); for best results, charge the battery at temperatures above 20°C (68°F). Battery capacity may temporarily drop if the battery is charged at low temperatures.

The battery may be hot immediately after use. Wait for the battery to cool before recharging.

Use the charger with compatible batteries only. Unplug when not in use.
Attach a Lens

Care should be taken to prevent dust from entering the camera when the lens is removed. The lens generally used in this manual for illustrative purposes is an AF-S DX NIKKOR 18–55mm f/3.5–5.6G VR.

1 Turn the camera off.

2 Remove the rear lens cap and the camera body cap.

3 Attach the lens.
   Keeping the mounting index on the lens aligned with the mounting index on the camera body, position the lens in the camera’s bayonet mount. Being careful not to press the lens-release button, rotate the lens counter-clockwise until it clicks into place.

   Slide the A-M switch to A (autofocus; if the lens has an M/A-M switch, select M/A for autofocus with manual priority).

Autofocus
Autofocus is supported with only AF-S and AF-I lenses, which are equipped with autofocus motors. Autofocus is not available with other AF lenses.
Basic Setup

A language-selection dialog will be displayed the first time the camera is turned on. Choose a language and set the time and date. Photographs can not be taken until you have set the time and date.

1 Turn the camera on.
A language-selection dialog will be displayed.

2 Select a language.
Press ▲ or ▼ to highlight the desired language and press OK.

3 Choose a time zone.
Press ◀ or ▶ to highlight the local time zone (the UTC field shows the difference between the selected time zone and Coordinated Universal Time, or UTC, in hours) and press OK.

4 Choose a date format.
Press ▲ or ▼ to choose the order in which the year, month, and day will be displayed. Press OK to proceed to the next step.

5 Turn daylight saving time on or off.
Daylight saving time is off by default; if daylight saving time is in effect in the local time zone, press ▲ to highlight On and press OK.

6 Set the date and time.
The dialog shown at right will be displayed. Press ◀ or ▶ to select an item, ▲ or ▼ to change. Press OK to set the clock and exit to shooting mode.

The Camera Clock
The camera clock is less accurate than most watches and household clocks. Check the clock regularly against more accurate time pieces and reset as necessary.
Insert a Memory Card

The camera stores pictures on Secure Digital (SD) memory cards (available separately).

1 Turn the camera off.

- Inserting and Removing Memory Cards
  Always turn the camera off before inserting or removing memory cards.

2 Open the card slot cover.

   Slide the card slot cover out (①) and open the card slot (②).

3 Insert the memory card.

   Holding the memory card as shown at right, slide it in until it clicks into place. The memory card access lamp will light for a few seconds. Close the memory card slot cover.

- Inserting Memory Cards
  Inserting memory cards upside down or backwards could damage the camera or the card. Check to be sure the card is in the correct orientation.

If this is the first time the memory card will be used in the camera or the card has been formatted in another device, format the card as described on page 15.

Removing Memory Cards

After confirming that the access lamp is off, turn the camera off, open the memory card slot cover, and press the card in to eject it (①). The card can then be removed by hand (②).

- The Write Protect Switch
  Memory cards are equipped with a write protect switch to prevent accidental loss of data. When this switch is in the “lock” position, the memory card can not be formatted and photos can not be deleted or recorded (a beep will sound if you attempt to release the shutter). To unlock the memory card, slide the switch to the “write” position.
Format the Memory Card

Memory cards must be formatted before first use or after being formatted in other devices. Format the card as described below.

✔ Formatting Memory Cards
   Formatting memory cards permanently deletes any data they may contain. Be sure to copy any photographs and other data you wish to keep to a computer before proceeding.

1 Turn the camera on.

2 Display format options.
   Press the MENU button to display the menus. Highlight Format memory card in the setup menu and press ▶. For more information on using the menus, see page 7.

3 Highlight Yes.
   To exit without formatting the memory card, highlight No and press OK.

4 Press OK.
   The message at right will be displayed while the card is formatted. Do not remove the memory card or remove or disconnect the power source until formatting is complete.

✔ Memory Cards
   • Memory cards may be hot after use. Observe due caution when removing memory cards from the camera.
   • Turn the power off before inserting or removing memory cards. Do not remove memory cards from the camera, turn the camera off, or remove or disconnect the power source during formatting or while data are being recorded, deleted, or copied to a computer. Failure to observe these precautions could result in loss of data or in damage to the camera or card.
   • Do not touch the card terminals with your fingers or metal objects.
   • Do not bend, drop, or subject to strong physical shocks.
   • Do not apply force to the card casing. Failure to observe this precaution could damage the card.
   • Do not expose to water, heat, high levels of humidity, or direct sunlight.
Adjust Viewfinder Focus

The camera is equipped with diopter adjustment to accommodate individual differences in vision. Check that the display in the viewfinder is in focus before framing pictures in the viewfinder.

1. Remove the lens cap and turn the camera on.

2. Focus the viewfinder.
   Slide the diopter adjustment control up and down until the viewfinder display and focus point are in sharp focus. When operating the control with your eye to the viewfinder, be careful not to put your fingers or fingernails in your eye.

⚠️ Adjusting Viewfinder Focus
If you are unable to focus the viewfinder as described above, select single-servo autofocus (**AF-S; 34**), single-point AF (**AF; 35**), and the center focus point, and then frame a high-contrast subject in the center focus point and press the shutter-release button halfway to focus the camera. With the camera in focus, use the diopter adjustment control to bring the subject into clear focus in the viewfinder. If necessary, viewfinder focus can be further adjusted using optional corrective lenses.
Basic Photography and Playback

“Point-and-Shoot” Photography
(AUTO and Manual Modes)

This section describes how to take photographs in AUTO (auto) mode, an automatic “point-and-shoot” mode in which the majority of settings are controlled by the camera in response to shooting conditions, and in which the flash will fire automatically if the subject is poorly lit. To take photographs with the flash off while leaving the camera in control of other settings, rotate the mode dial to Manual to select auto (flash off) mode.

Step 1: Turn the Camera On

1. Turn the camera on.
   Remove the lens cap and turn the camera on. The information display will appear in the monitor.

2. Check the battery level.
   Check the battery level in the information display or the viewfinder (if the monitor is off, press the button to view the information display; if the monitor does not turn on, the battery is exhausted and must be recharged).

<table>
<thead>
<tr>
<th>Information display</th>
<th>Viewfinder</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image" alt="Battery fully charged." /></td>
<td>—</td>
<td>Battery fully charged.</td>
</tr>
<tr>
<td><img src="image" alt="Battery partially discharged." /></td>
<td>—</td>
<td>Battery partially discharged.</td>
</tr>
<tr>
<td><img src="image" alt="Low battery. Ready fully-charged spare battery or prepare to charge battery." /></td>
<td></td>
<td>Low battery. Ready fully-charged spare battery or prepare to charge battery.</td>
</tr>
<tr>
<td><img src="image" alt="Battery exhausted; shutter release disabled. Charge or exchange battery." /></td>
<td></td>
<td>Battery exhausted; shutter release disabled. Charge or exchange battery.</td>
</tr>
</tbody>
</table>
3 Check the number of exposures remaining.

The information display and viewfinder show the number of photographs that can be stored on the memory card. Check the number of exposures remaining.

If there is not enough memory to store additional photographs at current settings, a warning will be displayed. No further pictures can be taken until the memory card has been replaced (14) or photographs have been deleted (25).

When enough memory remains on the memory card to record a thousand or more pictures at current settings, the number of exposures remaining will be shown in thousands, rounded down to the nearest hundred (e.g., if there is room for 1,260 exposures, the exposure count display will show 1.2 K).

Auto Meter Off
At default settings, the viewfinder and information display will turn off if no operations are performed for about eight seconds (auto meter off), reducing the drain on the battery. Press the shutter-release button halfway to reactivate the display (21).

Image Sensor Cleaning
At default settings, the camera vibrates the low-pass filter covering the image sensor to remove dust when the camera is turned on or off.
Step 2: Select AUTO or M Mode

To shoot where use of a flash is prohibited, photograph infants, or capture natural lighting under low light conditions, rotate the mode dial to M. Otherwise, rotate the mode dial to AUTO.

Step 3: Frame the Photograph

1 Ready the camera.

When framing photographs in the viewfinder, hold the handgrip in your right hand and cradle the camera body or lens with your left. Keep your elbows propped lightly against your torso for support and place one foot half a pace ahead of the other to keep your upper body stable.

Hold the camera as shown at right when framing photographs in portrait (tall) orientation.

In M mode, shutter speeds slow when lighting is poor; use of a tripod is recommended.

2 Frame the photograph.

Frame a photograph in the viewfinder with the main subject in at least one of the 11 focus points.
Using a Zoom Lens
Use the zoom ring to zoom in on the subject so that it fills a larger area of the frame, or zoom out to increase the area visible in the final photograph (select longer focal lengths on the lens focal length scale index to zoom in, shorter focal lengths to zoom out).

Step 4: Focus

1 Press the shutter-release button halfway.
Press the shutter-release button halfway to focus. The camera will select the focus points automatically. If the subject is poorly lit, the flash may pop up and the AF-assist illuminator may light.

2 Check the indicators in the viewfinder.
When the focus operation is complete, the selected focus points will be briefly highlighted, a beep will sound, and the in-focus indicator (●) will appear in the viewfinder.

<table>
<thead>
<tr>
<th>In-focus indicator</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>●</td>
<td>Subject in focus.</td>
</tr>
<tr>
<td>● (blinks)</td>
<td>Camera unable to focus using autofocus. See page 34.</td>
</tr>
</tbody>
</table>

While the shutter-release button is pressed halfway, the number of exposures that can be stored in the memory buffer (“ Recall” symbol; 39) will be displayed in the viewfinder.
Step 5: Shoot

Smoothly press the shutter-release button the rest of the way down to release the shutter and record the photograph. The access lamp next to the memory card slot cover will light and the photograph will be displayed in the monitor for a few seconds (the photo will automatically clear from the display when the shutter-release button is pressed halfway). Do not eject the memory card or remove or disconnect the power source until the lamp has gone out and recording is complete.

The Shutter-Release Button

The camera has a two-stage shutter-release button. The camera focuses when the shutter-release button is pressed halfway. To take the photograph, press the shutter-release button the rest of the way down.

The Built-in Flash

If additional lighting is required for correct exposure in AUTO mode, the built-in flash will pop up automatically when the shutter-release button is pressed halfway. If the flash is raised, photographs can only be taken when the flash-ready indicator ($) is displayed. If the flash-ready indicator is not displayed, the flash is charging; remove your finger briefly from the shutter-release button and try again.

To save battery power when the flash is not in use, return it to its closed position by pressing it gently downward till the latch clicks into place.

Using the Flash

For more information on using the flash, see page 42.
Creative Photography (Scene Modes)

The camera offers a choice of “scene” modes. Choosing a scene mode automatically optimizes settings to suit the selected scene, making creative photography as simple as selecting a mode, framing a picture, and shooting as described on pages 17–21.

■ The Mode Dial

The following scenes can be selected with the mode dial:

<table>
<thead>
<tr>
<th>Mode</th>
</tr>
</thead>
<tbody>
<tr>
<td>Portrait</td>
</tr>
<tr>
<td>Landscape</td>
</tr>
<tr>
<td>Child</td>
</tr>
<tr>
<td>Sports</td>
</tr>
<tr>
<td>Close up</td>
</tr>
<tr>
<td>Night portrait</td>
</tr>
</tbody>
</table>

■ Scene Modes

■ Portrait

Use for portraits with soft, natural-looking skin tones. If the subject is far from the background or a telephoto lens is used, background details will be softened to lend the composition a sense of depth.

■ Landscape

Use for vivid landscape shots in daylight. The built-in flash and AF-assist illuminator turn off; use of a tripod is recommended to prevent blur when lighting is poor.
Child

Use for snapshots of children. Clothing and background details are vividly rendered, while skin tones remain soft and natural.

Sports

Fast shutter speeds freeze motion for dynamic sports shots in which the main subject stands out clearly. The built-in flash and AF-assist illuminator turn off.

Close Up

Use for close-up shots of flowers, insects, and other small objects (a macro lens can be used to focus at very close ranges). Use of a tripod is recommended to prevent blur.

Night Portrait

Use for a natural balance between the main subject and the background in portraits taken under low light. Use of a tripod is recommended to prevent blur.
Basic Playback

At default settings, photographs are automatically displayed for about four seconds after shooting. If no photograph is displayed in the monitor, the most recent picture can be viewed by pressing the \( \text{\( \Rightarrow \)} \) button.

1. **Press the \( \text{\( \Rightarrow \)} \) button.**
   A photograph will be displayed in the monitor.

2. **View additional pictures.**
   Additional pictures can be displayed by pressing \( \text{\( \downarrow \)} \) or \( \text{\( \uparrow \)} \) or rotating the command dial.

   To view additional information on the current photograph, press \( \text{\( \uparrow \)} \) and \( \text{\( \downarrow \)} \).
To display images in “contact sheets” of four, nine, or 72 images (thumbnail playback), press the 
button. Use the multi selector or command dial to highlight images and press \( \) to display the highlighted image full frame. Press \( \) to reduce the number of images displayed.

To view images taken on a selected date (calendar playback), press the 
button when 72 images are displayed. Press the 
button to toggle between the date list and the list of thumbnails for the selected date. Use the multi selector to highlight dates in the date list or to highlight pictures in the thumbnail list. Press \( \) when the cursor is in the date list to return to 72-frame playback.

To delete the photograph currently displayed in full-frame playback or highlighted in thumbnail playback or the thumbnail list, press the \( \) button. A confirmation dialog will be displayed; press the \( \) button again to delete the image and return to playback (to exit without deleting the picture, press \( \)).

To end playback and return to shooting mode, press the shutter-release button halfway.
Guide Mode

The Guide Menu

The guide menu gives access to a variety of frequently-used and useful functions. The top level of the guide menu is displayed when the mode dial is rotated to GUIDE.

Choose from the following menus:

<table>
<thead>
<tr>
<th>Shoot</th>
<th>View/delete</th>
<th>Set up</th>
</tr>
</thead>
<tbody>
<tr>
<td>Take pictures.</td>
<td>View and/or delete pictures.</td>
<td>Change camera settings.</td>
</tr>
</tbody>
</table>

Battery indicator (17)

Shooting mode: A guide mode indicator appears on the shooting mode icon.

Number of exposures remaining (18)

Guide Mode

Guide mode is reset to Easy operation > Auto when the mode dial is rotated to another setting or the camera is turned off. If no other option is selected when the shutter-release button is pressed, the camera will take pictures in auto mode. If the monitor turns off, the top level menu can be displayed by pressing the MENU button. To increase the time the monitor remains on when no operations are performed, select Set up > Auto off timers in the guide menu.

Displaying the Top Level of the Guide Menu

Press the MENU button at any time to return to the top level of the guide menu.
The following operations can be performed while the guide menu is displayed:

<table>
<thead>
<tr>
<th>To</th>
<th>Use</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Highlight options</td>
<td></td>
<td>Press ▲ or ▼ to highlight options in the guide menu.</td>
</tr>
<tr>
<td></td>

<td>Press ▲, ▼, ◄, or ► to highlight options in displays like that shown at right.</td>
</tr>
<tr>
<td>Select highlighted option</td>
<td></td>
<td>Press 〇 to select the highlighted option.</td>
</tr>
<tr>
<td>Return to previous display</td>
<td></td>
<td>Press ◄ to return to the previous display.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>To cancel and return to the previous display from displays like that shown at right, highlight ❑ and press 〇.</td>
</tr>
<tr>
<td>Return to top level menu</td>
<td></td>
<td>Press MENU to return to the top level of the guide menu.</td>
</tr>
<tr>
<td>View help</td>
<td></td>
<td>If a ？ icon is displayed at the bottom left corner of the monitor, help can be displayed by pressing the ？ (❓) button. A description of the currently selected option will be displayed while the button is pressed. Press ▲ or ▼ to scroll through the display.</td>
</tr>
</tbody>
</table>
Shoot: Taking Pictures in Guide Mode

Select **Shoot** to take pictures using settings that suit the scene.

Highlight **Shoot** in the top level of the guide menu and press OK to display the following options:

### Easy operation

- **Auto**
- **No flash**
- **Close-ups**
- **Sleeping faces**
- **Landscapes**
- **Portraits**
- **No flash**
- **Moving subjects**
- **Night portrait**

### Advanced operation

- **Soften backgrounds**: Select aperture
- **Freeze motion (people)**: Select a shutter speed
- **Freeze motion (vehicles)**: Select a shutter speed

### Timers & remote control

- **Single frame**
- **Continuous**
- **10s 10-second self-timer**
- **2s Delayed remote**
- **Quick-response remote**

1. Built-in flash turns off automatically. Optional flash units can still be used.
2. AF-assist illuminator turns off automatically.
3. If the subject is poorly lit, you can raise ISO sensitivity as described on page 45 after selecting **Start shooting**.
To select a scene (**Easy operation** > **Auto** in this example):

Highlight an option

Highlight a scene

Press

Press **OK** to view camera settings in the information display (**6**)

**More Settings**

Select **More settings** to adjust the following:

- **Flash mode**
- **Release mode**
- **Exposure compensation**
- **AF-area mode**
- **Flash compensation**

1 Modes available vary with shooting option selected in guide mode.
2 **Advanced operation** only.

---

**Displaying the Top Level of the Guide Menu**

Press the **MENU** button at any time to return to the top level of the guide menu.
View/Delete: Viewing and Deleting Pictures in Guide Mode

Select **View/delete** to view and delete pictures.

Highlight **View/delete** in the top level of the guide menu and press **OK** to display the following options:

- **View single photos**
- **View multiple photos**
- **Choose a date**
- **View a slide show**
- **Delete photos**

To select an option (**View single photos** in this example):

- Highlight an option
- Press **OK** to select

**Displaying the Top Level of the Guide Menu**

Press the **MENU** button at any time to return to the top level of the guide menu.
Set up: Changing Camera Settings in Guide Mode

Select **Set up** to format memory cards or adjust camera settings.

Highlight **Set up** in the top level of the guide menu and press 
 to display the following options:

<table>
<thead>
<tr>
<th>Image quality</th>
<th>LCD brightness</th>
<th>Auto off timers</th>
</tr>
</thead>
<tbody>
<tr>
<td>Image size</td>
<td>Info background color</td>
<td>Beep</td>
</tr>
<tr>
<td>Active D-Lighting</td>
<td>Auto info display</td>
<td>Date imprint</td>
</tr>
<tr>
<td>Playback folder</td>
<td>Video mode</td>
<td>No memory card?</td>
</tr>
<tr>
<td>Print set (DPOF)</td>
<td>Time zone and date</td>
<td>Eye-Fi upload*</td>
</tr>
<tr>
<td>Format memory card</td>
<td>Language</td>
<td></td>
</tr>
</tbody>
</table>

* Only available when compatible Eye-Fi memory card is inserted.

Changes to settings other than **Playback folder**, **Print set (DPOF)**, **Format memory card**, **Video mode**, **Time zone and date**, **Language**, **No memory card?**, and **Eye-Fi upload** only apply in guide mode and are not reflected in other shooting modes.

To select an option (**Beep > Off** in this example):

1. **Highlight a setting**
2. **Press 
 to display options**
3. **Highlight an option**
4. **Press 
 to select**

**Displaying the Top Level of the Guide Menu**

Press the **MENU** button at any time to return to the top level of the guide menu.
More on Photography

For More Information
See the Reference Manual (available in pdf format on the supplied reference CD) for information on P, S, A, and M modes, playback, copying pictures to a computer, printing pictures, viewing pictures on TV, camera menus, troubleshooting, and optional flash units. For information on viewing the Reference Manual, see the inside front cover of this booklet.

Focus

Focus can be adjusted automatically or manually (see “Focus Mode,” below). The user can also select the focus point for automatic or manual focus using the multi selector.

Focus Mode

Choose from automatic and manual focus modes.

1 Place the cursor in the information display.
   If shooting information is not displayed in the monitor, press the Info button. Press the button to place the cursor in the information display.

2 Display focus-mode options.
   Highlight the current focus mode in the information display and press OK.
3 Choose a focus mode.
Highlight one of the following options and press 📈. Note that AF-S and AF-C are available only in modes P, S, A, and M.

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>AF-A Auto-servo AF</td>
<td>Camera automatically selects single-servo autofocus if subject is stationary, continuous-servo autofocus if subject is moving.</td>
</tr>
<tr>
<td>AF-S Single-servo AF</td>
<td>For stationary subjects. Focus locks when shutter-release button is pressed halfway. Shutter can only be released if camera is able to focus.</td>
</tr>
<tr>
<td>AF-C Continuous-servo AF</td>
<td>For moving subjects. Camera focuses continuously while shutter-release button is pressed halfway. Shutter can only be released if camera is able to focus.</td>
</tr>
<tr>
<td>MF Manual focus</td>
<td>Focus using lens focus ring (if lens is equipped with A/M switch, slide switch to M before focusing).</td>
</tr>
</tbody>
</table>

✅ Continuous-servo Autofocus
In AF-C mode or when continuous-servo autofocus is selected in AF-A mode, the camera gives higher priority to focus response (has a wider focus range) than in AF-S mode, and the shutter may be released before the in-focus indicator is displayed.

⚠ Getting Good Results with Autofocus
Autofocus does not perform well under the conditions listed below. The shutter release may be disabled if the camera is unable to focus under these conditions, or the in-focus indicator (●) may be displayed and the camera may sound a beep, allowing the shutter to be released even when the subject is not in focus. In these cases, focus manually or use focus lock to focus on another subject at the same distance and then recompose the photograph.

- There is little or no contrast between the subject and the background.
  - Example: Subject is the same color as the background.

- The focus point contains objects at different distances from the camera.
  - Example: Subject is inside a cage.

- The subject is dominated by regular geometric patterns.
  - Example: A row of windows in a skyscraper.

- The focus point contains areas of sharply contrasting brightness.
  - Example: Subject is half in the shade.

- Background objects appear larger than the subject.
  - Example: A building is in the frame behind the subject.

- The subject contains many fine details.
  - Example: A field of flowers or other subjects that are small or lack variation in brightness.
# AF-Area Mode

Choose how the focus point for autofocus is selected.

1. **Place the cursor in the information display.**  
   If shooting information is not displayed in the monitor, press the button. Press the button to place the cursor in the information display.

   ![Cursor placement](image1)

2. **Display AF-area mode options.**  
   Highlight the current AF-area mode in the information display and press .

3. **Choose an AF-area mode.**  
   Highlight one of the following options and press . 

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>[c] Single point</td>
<td>User selects focus point using multi selector; camera focuses on subject in selected focus point only. Use with stationary subjects.</td>
</tr>
<tr>
<td>[o] Dynamic area</td>
<td>In <strong>AF-A and AF-C focus modes</strong>, user selects focus point using multi selector, but camera will focus based on information from surrounding focus points if subject briefly leaves selected point. Use with erratically moving subjects. <strong>In AF-S focus mode</strong>, camera focuses only on subject in focus point selected by user.</td>
</tr>
<tr>
<td>[m] Auto-area</td>
<td>Camera automatically detects subject and selects focus point.</td>
</tr>
<tr>
<td>[3D] 3D-tracking (11 points)</td>
<td>In <strong>AF-A and AF-C focus modes</strong>, user selects focus point using multi selector. If subject moves after camera has focused, camera uses 3D-tracking to select new focus point and keep focus locked on original subject while shutter-release button is pressed halfway. If subject leaves viewfinder, remove your finger from shutter-release button and recompose photograph with subject in selected focus point. Note that 3D-tracking may not produce the desired results with subjects that are the same color as the background.</td>
</tr>
</tbody>
</table>
Image Quality and Size

Together, image quality and size determine how much space each photograph occupies on the memory card. Larger, higher quality images can be printed at larger sizes but also require more memory, meaning that fewer such images can be stored on the memory card.

Image Quality

Choose a file format and compression ratio (image quality).

1 **Place the cursor in the information display.**
   If shooting information is not displayed in the monitor, press the **
   button. Press the ** button to place the cursor in the information display.

2 **Display image quality options.**
   Highlight the current image quality in the information display and press **.

3 **Choose a file type.**
   Highlight one of the following options and press **.

<table>
<thead>
<tr>
<th>Option</th>
<th>File type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>NEF (RAW)</td>
<td>NEF</td>
<td>Raw 12-bit data from the image sensor are saved directly to the memory card. Choose for images that will be processed on a computer.</td>
</tr>
<tr>
<td>JPEG fine</td>
<td>JPEG</td>
<td>Record JPEG images at a compression ratio of roughly 1 : 4 (fine image quality).</td>
</tr>
<tr>
<td>JPEG normal</td>
<td>JPEG</td>
<td>Record JPEG images at a compression ratio of roughly 1 : 8 (normal image quality).</td>
</tr>
<tr>
<td>JPEG basic</td>
<td>JPEG</td>
<td>Record JPEG images at a compression ratio of roughly 1 : 16 (basic image quality).</td>
</tr>
<tr>
<td>NEF (RAW) + JPEG basic</td>
<td>NEF/JPEG</td>
<td>Two images are recorded: one NEF (RAW) image and one basic-quality JPEG image.</td>
</tr>
</tbody>
</table>
Image Size

Image size is measured in pixels.

1 Place the cursor in the information display.
If shooting information is not displayed in the monitor, press the button. Press the button to place the cursor in the information display.

2 Display image size options.
Highlight the current image size in the information display and press .

3 Choose an image size.
Highlight one of the following options and press .

<table>
<thead>
<tr>
<th>Image size</th>
<th>Size (pixels)</th>
<th>Approximate size when printed at 200 dpi</th>
</tr>
</thead>
<tbody>
<tr>
<td>Large</td>
<td>3,872 × 2,592</td>
<td>49.2 × 32.9 cm (19.4 × 13.0 in.)</td>
</tr>
<tr>
<td>Medium</td>
<td>2,896 × 1,944</td>
<td>36.8 × 24.7 cm (14.5 × 9.7 in.)</td>
</tr>
<tr>
<td>Small</td>
<td>1,936 × 1,296</td>
<td>24.6 × 16.5 cm (9.7 × 6.5 in.)</td>
</tr>
</tbody>
</table>

File Names
Photographs are stored as image files with names consisting of a three-letter identifier (“DSC” for photos, “SSC” for copies created with the small picture option in the retouch menu, “ASC” for stop-motion movies, and “CSC” for copies created with other retouch options) followed by “_nnnn.xxx,” where nnnn is a four-digit number between 0001 and 9999 assigned automatically in ascending order by the camera, and xxx is one of the following three letter extensions: “NEF” for NEF images, “JPG” for JPEG images, or “AVI” for stop-motion movies. The NEF and JPEG files recorded at a setting of NEF (RAW) + JPEG basic have the same file names but different extensions.
**Release Mode**

Release mode determines how the camera takes photographs: one at a time, in a continuous sequence, or with a timed shutter-release delay or remote control.

1. **Place the cursor in the information display.**
   - If shooting information is not displayed in the monitor, press the **Info** button. Press the **P** button to place the cursor in the information display.

2. **Display release mode options.**
   - Highlight the current release mode in the information display and press **OK**.

3. **Choose a release mode.**
   - Highlight one of the following options and press **OK**.

<table>
<thead>
<tr>
<th>Mode</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Single frame</td>
<td>Camera takes one photograph each time shutter-release button is pressed.</td>
</tr>
<tr>
<td>Continuous</td>
<td>Camera records about 3 frames per second while shutter-release button is held down.</td>
</tr>
<tr>
<td>Self-timer</td>
<td>Use for self-portraits or to reduce blurring caused by camera shake (39).</td>
</tr>
<tr>
<td>Delayed remote</td>
<td>Optional ML-L3 wireless remote control required. Shutter is released after two-second delay (39).</td>
</tr>
<tr>
<td>Quick-response remote</td>
<td>Optional ML-L3 wireless remote control required. Shutter is released immediately (39).</td>
</tr>
</tbody>
</table>
The Memory Buffer
The camera is equipped with a memory buffer for temporary storage, allowing shooting to continue while photographs are being saved to the memory card. Up to 100 photographs can be taken in succession; note, however, that frame rate will drop when the buffer is full.

While photographs are being recorded to the memory card, the access lamp next to the memory card slot will light. Depending on the number of the images in the buffer, recording may take from a few seconds to a few minutes. Do not remove the memory card or remove or disconnect the power source until the access lamp has gone out. If the camera is switched off while data remain in the buffer, the power will not turn off until all images in the buffer have been recorded. If the battery is exhausted while images remain in the buffer, the shutter release will be disabled and the images transferred to the memory card.

Continuous Release Mode
Continuous release mode (③) can not be used with the built-in flash; rotate the mode dial to ④ (③ 19) or turn the flash off (③ 42–44).

Buffer Size
The approximate number of images that can be stored in the memory buffer at current settings is shown in the viewfinder exposure-count display while the shutter-release button is pressed. The illustration shows the display when space remains in the buffer for about 21 pictures.

Self-Timer and Remote Modes
The self-timer and optional ML-L3 wireless remote control can be used to reduce camera shake or for self-portraits.

1 Mount the camera on a tripod.
   Mount the camera on a tripod or place the camera on a stable, level surface.

2 Select a release mode (③ 38).
   Select self-timer (⑦), delayed remote (③ 2s), or quick-response remote mode (⑧).
3 Frame the photograph.

Using a Remote Control
If autofocus is in effect in delayed remote or quick-response remote mode, the camera can be focused by pressing the shutter-release button halfway (the shutter will not be released if the shutter-release button is pressed all the way down).

Cover the Viewfinder
After framing the photograph, remove the DK-20 rubber eyecup (1) and insert the supplied DK-5 eyepiece cap as shown (2). This prevents light entering via the viewfinder interfering with exposure. Hold the camera firmly when removing the rubber eyecup.

4 Take the photograph.

Self-timer mode: Press the shutter-release button halfway to focus, and then press the button the rest of the way down to start the self-timer. The self-timer lamp will start to blink and a beep will begin to sound. Two seconds before the photograph is taken, the self-timer lamp will stop blinking and the beeping will become more rapid. The shutter will be released ten seconds after the timer starts.

The timer will not start if the camera is unable to focus or in other situations in which the shutter can not be released.

Delayed remote and quick-response remote modes: From a distance of 5 m (16 ft.) or less, aim the transmitter on the ML-L3 at the infrared receiver on the camera and press the shutter-release button on the ML-L3. In delayed remote mode, the self-timer lamp will light for about two seconds before the shutter is released. In quick-response remote mode, the self-timer lamp will flash after the shutter has been released. No picture will be taken if the camera is unable to focus or in other situations in which the shutter can not be released.

If no operations are performed for about five minutes after selecting delayed remote or quick-response remote modes, the camera will automatically return to single frame or continuous mode, cancelling remote control mode.
Turning the camera off cancels self-timer and remote release modes and restores single frame or continuous mode.

✔ Before Using the Remote Control
Before using the remote control for the first time, remove the clear plastic battery insulator sheet.

✔ Using the Built-in Flash
Before taking a photograph with the flash in P, S, A, or M modes, press the $ button to raise the flash and wait for the $ indicator to be displayed in the viewfinder (42). Shooting will be interrupted if the flash is raised after the self-timer or delayed remote timer has started. In auto or scene modes in which the flash pops up automatically, the flash will begin charging when delayed remote or quick-response remote mode is selected; once the flash is charged, it will automatically pop up and fire if required when the shutter-release button on the ML-L3 is pressed. The camera will only respond to the shutter-release button on the ML-L3 once the flash has charged.
Using the Built-in Flash

The camera supports a variety of flash modes for photographing poorly lit or backlit subjects.

- **Using the Built-in Flash: AUTO, , , , and Modes**

1. Choose a flash mode (43).

2. Take pictures.
   The flash will pop up as required when the shutter-release button is pressed halfway, and fire when a photograph is taken.

- **Using the Built-in Flash: P, S, A, and M Modes**

1. Raise the flash.
   Press the $ button to raise the flash.

2. Choose a flash mode (43).

3. Take pictures.
   The flash will fire whenever a picture is taken.

- **Lowering the Built-in Flash**

To save power when the flash is not in use, press it gently downward until the latch clicks into place.
Flash Mode

To choose a flash mode:

1 Place the cursor in the information display.
   If shooting information is not displayed in the monitor, press the \[a\] button. Press the \[b\] button to place the cursor in the information display.

2 Display flash mode options.
   Highlight the current flash mode in the information display and press \[\text{OK}\].

3 Choose a flash mode.
   Highlight a mode and press \[\text{OK}\]. The flash modes available vary with shooting mode:

   \[
   \begin{array}{|c|c|}
   \hline
   & \text{Flash Mode} \\
   \hline
   \text{N, Z, E, Z} & \text{AUTO} \quad \text{Auto} \\
   & \text{\textbullet} \quad \text{AUTO} \quad \text{Auto + red-eye reduction} \\
   & \text{\textbullet} \quad \text{Off} \\
   \hline

   \end{array}
   \]

* SLOW appears in information display when setting is complete.
The flash modes listed on the previous page may combine one or more of the following settings, as shown by the flash mode icon:

- **AUTO (auto flash)**: When lighting is poor or subject is back lit, flash pops up automatically when shutter-release button is pressed halfway and fires as required.
- **Θ (red-eye reduction)**: Use for portraits. Red-eye reduction lamp lights before flash fires, reducing “red-eye.”
- **Θ (off)**: Flash does not fire even when lighting is poor or subject is back-lit.
- **SLOW (slow sync)**: Shutter speed slows automatically to capture background lighting at night or under low light. Use to include background lighting in portraits.
- **REAR (rear-curtain sync)**: Flash fires just before shutter closes, creating a stream of light behind moving light sources (below at right). If this icon is not displayed, flash will fire as the shutter opens (front-curtain sync; the effect this produces with moving light sources is shown below at left).

**Choosing a Flash Mode**
The flash mode can also be selected by pressing the $ button and rotating the command dial (in P, S, A, and M modes, raise the flash before using the $ button to choose the flash mode).

**The Built-in Flash**
Remove lens hoods to prevent shadows. The flash has a minimum range of 0.6 m (2 ft.) and can not be used in the macro range of macro zoom lenses.

The shutter release may be briefly disabled to protect the flash after it has been used for several consecutive shots. The flash can be used again after a short pause.

**Shutter Speeds Available with the Built-in Flash**
The following shutter speeds are available with the built-in flash.

<table>
<thead>
<tr>

ISO Sensitivity

“ISO sensitivity” is the digital equivalent of film speed. The higher the ISO sensitivity, the less light needed to make an exposure, allowing higher shutter speeds or smaller apertures.

1. **Place the cursor in the information display.**
   If shooting information is not displayed in the monitor, press the 
   button. Press the button to place the cursor in the information display.

2. **Display ISO sensitivity options.**
   Highlight the current ISO sensitivity in the information display and press .

3. **Choose an ISO sensitivity.**
   Highlight an option and press . ISO sensitivity can be set between values roughly equivalent to ISO 100 and ISO 1600 in steps equivalent to 1 EV. For special situations, ISO sensitivity can be raised above ISO 1600 by about 1 EV (Hi 1, equivalent to ISO 3200). Auto and scene modes also offer an AUTO option, which allows the camera to set ISO sensitivity automatically in response to lighting conditions.

Hi 1
Pictures taken at this setting are more likely to be subject to noise and color distortion.
Active D-Lighting

If **On** is selected, the camera automatically adjusts Active D-Lighting during shooting to preserve details in highlights and shadows, creating photographs with natural contrast. Use for high contrast scenes, for example when photographing brightly lit outdoor scenery through a door or window or taking pictures of shaded subjects on a sunny day. It is most effective when used with **Matrix** metering.

1. **Place the cursor in the information display.**
   If shooting information is not displayed in the monitor, press the **Info** button. Press the **P** button to place the cursor in the information display.

2. **Display Active D-Lighting options.**
   Highlight Active D-Lighting in the information display and press **OK**.

3. **Choose an option.**
   Highlight **On** or **Off** and press **OK**.

**Active D-Lighting**
Noise (graininess, banding, and mottling) may appear in photographs taken with Active D-Lighting at high ISO sensitivities. More time is required to record images when Active D-Lighting is on.
Technical Notes

Compatible CPU Lenses

Autofocus is available with AF-S and AF-I CPU lenses only; autofocus is not supported with other autofocus (AF) lenses. IX NIKKOR lenses cannot be used. The features available with compatible CPU lenses are listed below. For information on compatible non-CPU lenses and lenses that can be used with the flash and AF-assist illuminator, see the Reference Manual (on CD).

1 Use AF-S or AF-I lenses to get the most from your camera.
2 Vibration Reduction (VR) supported with VR lenses.
3 Can not be used with shifting or tilting.
4 The camera’s exposure metering and flash control systems may not function as expected when the lens is shifted and/or tilted or an aperture other than the maximum aperture is used.
5 AF-S or AF-I lens required.
6 With maximum effective aperture of f/5.6 or faster.
7 When AF 80–200mm f/2.8, AF 35–70mm f/2.8, AF 28–85mm f/3.5–4.5 (New), or AF 28–85mm f/3.5–4.5 lenses are zoomed all the way in at the minimum focus distance, the in-focus indicator may be displayed when the image on the matte screen in the viewfinder is not in focus. Focus manually until image in viewfinder is in focus.
8 With maximum aperture of f/5.6 or faster.

1 Use AF-S or AF-I lenses to get the most from your camera. Vibration Reduction (VR) supported with VR lenses.
2 Spot metering meters selected focus point.
3 Can not be used with shifting or tilting.
4 The camera’s exposure metering and flash control systems may not function as expected when the lens is shifted and/or tilted or an aperture other than the maximum aperture is used.

Identifying AF-S and AF-I Lenses
AF-S lenses have names beginning with AF-S, AF-I lenses names beginning with AF-I.

Identifying CPU and Type G and D Lenses
CPU lenses can be identified by the presence of CPU contacts, type G and D lenses by a letter on the lens barrel. Type G lenses are not equipped with a lens aperture ring.

Lens f-number
The f-number given in lens names is the maximum aperture of the lens.
At the time of writing, the following accessories were available for the D3000.

**Power sources**
- **Rechargeable Li-ion Battery EN-EL9a (10):** Additional EN-EL9a batteries are available from local retailers and Nikon service representatives. The EN-EL9a can be recharged using an MH-23 quick charger. EN-EL9 batteries can also be used.
- **Quick Charger MH-23 (10):** The MH-23 can be used to recharge EN-EL9a and EN-EL9 batteries.
- **Power Connector EP-5, AC Adapter EH-5a:** These accessories can be used to power the camera for extended periods (EH-5 AC adapters can also be used). The EP-5 is required to connect the camera to the EH-5a or EH-5.

**Video cable**
- **Video Cable EG-D100:** Use the EG-D100 to connect the camera to a TV.

**Filters**
- Nikon filters can be divided into three types: screw-on, slip-in, and rear-interchange. Use Nikon filters; filters manufactured by other makers may interfere with autofocus or the electronic rangefinder.
- The D3000 cannot be used with linear polarizing filters. Use the C-PL circular polarizing filter instead.
- The NC and L37C filters are recommended for protecting the lens.
- To prevent ghosting, use of a filter is not recommended when the subject is framed against a bright light, or when a bright light source is in the frame.
- Center-weighted metering is recommended with filters with exposure factors (filter factors) over 1 × (Y44, Y48, Y52, O56, R60, X0, X1, C-PL, ND2S, ND4, ND4S, ND8, ND8S, ND400, A2, A12, B2, B8, B12). See the filter manual for details.

**Viewfinder eyepiece accessories**
- **DK-20C Eyepiece Correction Lenses:** Lenses are available with diopters of −5, −4, −3, −2, 0, +0.5, +1, +2, and +3 m⁻¹ when the camera diopter adjustment control is in the neutral position (−1 m⁻¹). Use eyepiece correction lenses only if the desired focus can not be achieved with the built-in diopter adjustment control (−1.7 to +0.5 m⁻¹). Test eyepiece correction lenses before purchase to ensure that the desired focus can be achieved. The rubber eyecup cannot be used with eyepiece correction lenses.
- **Magnifier DG-2:** The DG-2 magnifies the scene displayed in the center of the viewfinder. Use for close-up photography, copying, telephoto lenses, and other tasks that require added precision. Eyepiece adapter required (available separately).
- **Eyepiece Adapter DK-22:** The DK-22 is used when attaching the DG-2 magnifier.
- **Right-Angle Viewing Attachment DR-6:** The DR-6 attaches at a right angle to the viewfinder eyepiece, allowing the image in the viewfinder to be viewed at right angles to the lens (for example, from directly above when the camera is horizontal).
### Optional flash units
- Nikon Speedlights SB-900, SB-800, SB-600, and SB-400
- Nikon Wireless Remote Speedlight SB-R200
- Wireless Speedlight Commander SU-800

### Software
**Capture NX 2:** A complete photo editing package.

**Note:** Use the latest versions of Nikon software. Most Nikon software offers an auto update feature when the computer is connected to the Internet. See the websites listed on the inside front cover of this booklet for the latest information on supported operating systems.

### Body cap
**BF-1B and BF-1A Body Caps:** The body cap keeps the mirror, viewfinder screen, and low-pass filter free of dust when a lens is not in place.

### Remote controls
**Wireless Remote Control ML-L3 (19 39):** Use as a remote shutter release for self-portraits or to prevent blur caused by camera shake. The ML-L3 uses a 3 V CR2025 battery.

Pressing the battery-chamber latch to the right (1), insert a fingernail into the gap and open the battery chamber (2). Ensure that the battery is inserted in the correct orientation (4).
Caring for the Camera

Storage
When the camera will not be used for an extended period, remove the battery and store it in a cool, dry area with the terminal cover in place. To prevent mold or mildew, store the camera in a dry, well-ventilated area. Do not store your camera with naphtha or camphor moth balls or in locations that:
• are poorly ventilated or subject to humidities of over 60%
• are next to equipment that produces strong electromagnetic fields, such as televisions or radios
• are exposed to temperatures above 50 °C (122 °F) or below –10 °C (14 °F)

Cleaning

</thead>
<tbody>
<tr>
<td>Camera body</td>
<td>Use a blower to remove dust and lint, then wipe gently with a soft, dry cloth. After using the camera at the beach or seaside, wipe off sand or salt with a cloth lightly dampened in distilled water and dry thoroughly. <strong>Important:</strong> Dust or other foreign matter inside the camera may cause damage not covered under warranty.</td>
</tr>
<tr>
<td>Lens, mirror, and viewfinder</td>
<td>These glass elements are easily damaged. Remove dust and lint with a blower. If using an aerosol blower, keep the can vertical to prevent the discharge of liquid. To remove fingerprints and other stains, apply a small amount of lens cleaner to a soft cloth and clean with care.</td>
</tr>
<tr>
<td>Monitor</td>
<td>Remove dust and lint with a blower. When removing fingerprints and other stains, wipe the surface lightly with a soft cloth or chamois leather. Do not apply pressure, as this could result in damage or malfunction.</td>
</tr>
</tbody>
</table>

*Do not use alcohol, thinner, or other volatile chemicals.*

Servicing the Camera and Accessories
The camera is a precision device and requires regular servicing. Nikon recommends that the camera be inspected by the original retailer or Nikon service representative once every one to two years, and that it be serviced once every three to five years (note that fees apply to these services). Frequent inspection and servicing are particularly recommended if the camera is used professionally. Any accessories regularly used with the camera, such as lenses or optional Speedlights, should be included when the camera is inspected or serviced.

Caring for the Camera and Battery: Cautions

*Do not drop:* The product may malfunction if subjected to strong shocks or vibration.

*Keep dry:* This product is not waterproof, and may malfunction if immersed in water or exposed to high levels of humidity. Rusting of the internal mechanism can cause irreparable damage.
Avoid sudden changes in temperature: Sudden changes in temperature, such as those that occur when entering or leaving a heated building on a cold day, can cause condensation inside the device. To prevent condensation, place the device in a carrying case or plastic bag before exposing it to sudden changes in temperature.

Keep away from strong magnetic fields: Do not use or store this device in the vicinity of equipment that generates strong electromagnetic radiation or magnetic fields. Strong static charges or the magnetic fields produced by equipment such as radio transmitters could interfere with the monitor, damage data stored on the memory card, or affect the product’s internal circuitry.

Do not leave the lens pointed at the sun: Do not leave the lens pointed at the sun or other strong light source for an extended period. Intense light may cause the image sensor to deteriorate or produce a white blur effect in photographs.

Turn the product off before removing or disconnecting the power source: Do not unplug the product or remove the battery while the product is on or while images are being recorded or deleted. Forcibly cutting power in these circumstances could result in loss of data or in damage to product memory or internal circuitry. To prevent an accidental interruption of power, avoid carrying the product from one location to another while the AC adapter is connected.

Cleaning: When cleaning the camera body, use a blower to gently remove dust and lint, then wipe gently with a soft, dry cloth. After using the camera at the beach or seaside, wipe off any sand or salt using a cloth lightly dampened in pure water and then dry the camera thoroughly.

The lens and mirror are easily damaged. Dust and lint should be gently removed with a blower. When using an aerosol blower, keep the can vertical to prevent discharge of liquid. To remove fingerprints and other stains from the lens, apply a small amount of lens cleaner to a soft cloth and wipe the lens carefully.

See the Reference Manual (on CD) for information on cleaning the low-pass filter.

Lens contacts: Keep the lens contacts clean.

Do not touch the shutter curtain: The shutter curtain is extremely thin and easily damaged. Under no circumstances should you exert pressure on the curtain, poke it with cleaning tools, or subject it to powerful air currents from a blower. These actions could scratch, deform, or tear the curtain.

Storage: To prevent mold or mildew, store the camera in a dry, well-ventilated area. If you are using an AC adapter, unplug the adapter to prevent fire. If the product will not be used for an extended period, remove the battery to prevent leakage and store the camera in a plastic bag containing a desiccant. Do not, however, store the camera case in a plastic bag, as this may cause the material to deteriorate. Note that desiccant gradually loses its capacity to absorb moisture and should be replaced at regular intervals.

To prevent mold or mildew, take the camera out of storage at least once a month. Turn the camera on and release the shutter a few times before putting it away.

Store the battery in a cool, dry place. Replace the terminal cover before putting the battery away.
**Notes on the monitor:** The monitor may contain a few pixels that are always lit or that do not light. This is common to all TFT LCD monitors and does not indicate a malfunction. Images recorded with the product are unaffected.

Images in the monitor may be difficult to see in a bright light.

Do not apply pressure to the monitor, as this could cause damage or malfunction. Dust or lint on the monitor can be removed with a blower. Stains can be removed by wiping lightly with a soft cloth or chamois leather. Should the monitor break, care should be taken to avoid injury from broken glass and to prevent liquid crystal from the monitor touching the skin or entering the eyes and mouth.

**Moiré:** Moiré is an interference pattern created by the interaction of an image containing a regular, repeating grid, such as the pattern of weave in cloth or windows in a building, with the camera image sensor grid. If you notice moiré in your photographs, try changing the distance to the subject, zooming in and out, or changing the angle between the subject and the camera.

**Batteries:** Dirt on the battery terminals can prevent the camera from functioning and should be removed with a soft, dry cloth before use.

Batteries may leak or explode if improperly handled. Observe the following precautions when handling batteries:

- Turn the product off before replacing the battery.
- The battery may become hot when used for extended periods. Observe due caution when handling the battery.
- Use only batteries approved for use in this equipment.
- Do not expose the battery to flame or excessive heat.
- After removing the battery from the camera, be sure to replace the terminal cover.
- Charge the battery before use. When taking photographs on important occasions, ready a spare EN-EL9a battery and keep it fully charged. Depending on your location, it may be difficult to purchase replacement batteries on short notice.

On cold days, the capacity of batteries tends to decrease. Be sure the battery is fully charged before taking photographs outside in cold weather. Keep a spare battery in a warm place and exchange the two as necessary. Once warmed, a cold battery may recover some of its charge.

Continuing to charge the battery after it is fully charged can impair battery performance.

Used batteries are a valuable resource. Please recycle used batteries in accord with local regulations.
Error Messages

This section lists the indicators and error messages that appear in the viewfinder and monitor.

⚠️ Warning Icons
A flashing 🟢 in the monitor or 🟢 in the viewfinder indicates that a warning or error message can be displayed in the monitor by pressing the ? (FAQ) button.

## Specifications

### Nikon D3000 Digital Camera

<table>
<thead>
<tr>
<th>Type</th>
<th>Single-lens reflex digital camera</th>
</tr>
</thead>
<tbody>
<tr>
<td>Lens mount</td>
<td>Nikon F mount (with AF contacts)</td>
</tr>
<tr>
<td>Effective picture angle</td>
<td>Approx. 1.5 × lens focal length (Nikon DX format)</td>
</tr>
</tbody>
</table>

### Effective pixels

| Effective pixels | 10.2 million |

### Image sensor

| Image sensor | 23.6 × 15.8 mm CCD sensor |
| Total pixels | 10.75 million |
| Dust-reduction System | Image sensor cleaning, Image Dust Off reference data (optional Capture NX 2 software required) |

### Storage

| Image size (pixels) | 3,872 × 2,592 (L) | 2,896 × 1,944 (M) |
| File format | NEF (RAW) |
| | JPEG: JPEG-Baseline compliant with fine (approx. 1 : 4), normal (approx. 1 : 8), or basic (approx. 1 : 16) compression |
| | NEF (RAW)+JPEG: Single photograph recorded in both NEF (RAW) and JPEG formats |
| Picture Control System | Can be selected from Standard, Neutral, Vivid, Monochrome, Portrait, Landscape; selected Picture Control can be modified |
| Media | SD (Secure Digital) memory cards, SDHC-compliant |
| File system | DCF (Design Rule for Camera File System) 2.0, DPOF (Digital Print Order Format), Exif 2.21 (Exchangeable Image File Format for Digital Still Cameras), PictBridge |

### Viewfinder

| Viewfinder | Eye-level pentamirror single-lens reflex viewfinder |
| Frame coverage | Approx. 95% horizontal and 95% vertical |
| Magnification | Approx. 0.8 × (50mm f/1.4 lens at infinity, –1.0 m⁻¹) |
| Eyepoint | 18 mm (–1.0 m⁻¹) |
| Diopter adjustment | –1.7 – +0.5 m⁻¹ |
| Focusing screen | Type B BriteView Clear Matte Mark V screen with focus frame (framing grid can be displayed) |
| Reflex mirror | Quick return |
| Lens aperture | Instant return, electronically controlled |
### Lens

**Compatible lenses**

- **AF-S or AF-I**: All functions supported.
- **Type G or D AF NIKKOR without built-in autofocus motor**: All functions except autofocus supported. IX NIKKOR lenses not supported.
- **Other AF NIKKOR**: All functions supported except autofocus and 3D color matrix metering II. Lenses for F3AF not supported.
- **Type D PC NIKKOR**: All functions supported except autofocus and some shooting modes.
- **AI-P NIKKOR**: All functions supported except autofocus and 3D color matrix metering II.
- **Non-CPU**: Autofocus not supported. Can be used in exposure mode M, but exposure meter does not function.

Electronic rangefinder can be used if lens has a maximum aperture of f/5.6 or faster.

### Shutter

**Type**

Electronically-controlled vertical-travel focal-plane shutter

**Speed**

1/4000 – 30 s in steps of 1/3 EV, bulb, time (requires optional ML-L3 wireless remote control)

**Flash sync speed**

X = 1/200 s; synchronizes with shutter at 1/200 s or slower

### Release

**Release mode**

- Single frame (single frame), 
- Continuous (continuous), 
- Self-timer (self-timer), 
- Delayed remote (delayed remote), 
- Quick-response remote (quick-response remote)

**Frame advance rate**

Up to 3 fps (manual focus, mode M or S, shutter speed 1/250 s or faster, and other settings at default values)

**Self-timer**

Can be selected from 2, 5, 10, and 20 s duration

### Exposure

**Metering**

TTL exposure metering using 420-pixel RGB sensor

**Metering method**

- **Matrix**: 3D color matrix metering II (type G and D lenses); color matrix metering II (other CPU lenses)
- **Center-weighted**: Weight of 75% given to 8-mm circle in center of frame
- **Spot**: Meters 3.5-mm circle (about 2.5% of frame) centered on selected focus point

**Range (ISO 100, f/1.4 lens, 20 °C/68 °F)**

- **Matrix or center-weighted metering**: 0 – 20 EV
- **Spot metering**: 2 – 20 EV

**Exposure meter coupling**

CPU

**Mode**

Auto modes (auto; auto (flash off)); scene modes (portrait; landscape; child; sports; close up; night portrait); programmed auto with flexible program (P); shutter-priority auto (S); aperture-priority auto (A); manual (M)

**Exposure compensation**

-5 – +5 EV in increments of 1/3 EV

**Exposure lock**

Luminosity locked at detected value with AE-L/AF-L button

**ISO sensitivity (Recommended Exposure Index)**

ISO 100 – 1600 in steps of 1 EV; can also be set to approx. 1 EV above ISO 1600 (ISO 3200 equivalent); auto ISO sensitivity control available

**Active D-Lighting**

Can be selected from On or Off
### Focus

**Autofocus**  
Nikon Multi-CAM 1000 autofocus sensor module with TTL phase detection, 11 focus points (including one cross-type sensor), and AF-assist illuminator (range approx. 0.5 – 3 m/1 ft. 8 in. – 9 ft. 10 in.).

<table>
<thead>
<tr>
<th>Detection range</th>
<th>–1 – +19 EV (ISO 100, 20 °C/68 °F)</th>
</tr>
</thead>
</table>

**Lens servo**  
- **Autofocus (AF):** Single-servo AF (AF-S); continuous-servo AF (AF-C); auto AF-S/AF-C selection (AF-A); predictive focus tracking activated automatically according to subject status
- **Manual focus (MF):** Electronic rangefinder can be used

**Focus point**  
Can be selected from 11 focus points

**AF-area mode**  
Single point, dynamic area, auto-area, 3D-tracking (11 points)

**Focus lock**  
Focus can be locked by pressing shutter-release button halfway (single-servo AF) or by pressing AE-L/AF-L button

### Flash

**Built-in flash**  
- **Auto:** Auto flash with auto pop-up
- **Manual:** Manual pop-up with button release

**Guide Number**  
Approx. 12/39, 13/43 with manual flash (m/ft, ISO 100, 20 °C/68 °F)

**Flash control**  
- **TTL:** i-TTL balanced fill-flash and standard i-TTL flash for digital SLR using 420-pixel RGB sensor are available with built-in flash and SB-900, SB-800, SB-600, or SB-400 (i-TTL balanced fill-flash is available when matrix or center-weighted metering is selected)
- **Auto aperture:** Available with SB-900/SB-800 and CPU lens
- **Non-TTL auto:** Supported flash units include SB-900, SB-800, SB-80DX, SB-28DX, SB-28, SB-27, and SB-22S
- **Distance-priority manual:** Available with SB-900 and SB-800

**Flash mode**  
- **Auto:** Auto, auto with red-eye reduction, off; fill-flash and red-eye reduction available with optional flash units
- **Slow sync:** Auto slow sync, auto slow sync with red-eye reduction, off; slow sync and slow sync with red-eye reduction available with optional flash units
- **Fill-flash:** Fill-flash and red-eye reduction available with optional flash units
- **Rear-curtain sync:** Fill-flash, rear-curtain with slow sync, slow sync, slow sync with red-eye reduction, red-eye reduction
- **Red-eye reduction:** Fill-flash, rear-curtain sync, red-eye reduction

**Flash compensation**  
–3 – +1 EV in increments of 1/3 EV

**Flash-ready indicator**  
Lights when built-in flash or optional flash unit such as SB-900, SB-800, SB-600, SB-400, SB-80DX, SB-28DX, or SB-50DX is fully charged; blinks for 3 s after flash is fired at full output

**Accessory shoe**  
ISO 518 hot-shoe contact with sync and data contacts and safety lock

**Nikon Creative Lighting System (CLS)**  
Advanced Wireless Lighting supported with SB-900, SB-800, or SU-800 as commander; Flash Color Information Communication supported with built-in flash and all CLS-compatible flash units

**Sync terminal**  
AS-15 sync terminal adapter (available separately)

### White balance

**White balance**  
Auto, incandescent, fluorescent (7 types), direct sunlight, flash, cloudy, shade, preset manual, all except preset manual with fine tuning.

### Monitor

**Monitor**  
3-in., approx. 230k-dot TFT LCD with brightness adjustment

**Battery Life**

The number of shots that can be taken with fully-charged batteries varies with the condition of the battery, temperature, and how the camera is used. Sample figures for EN-EL9a (1080 mAh) batteries are given below.

- **Single-frame release mode (CIPA standard)**: Approximately 550 shots
- **Continuous release mode (Nikon standard)**: Approximately 2000 shots

1. Measured at 23 °C/73.4 °F (±2 °C/3.6 °F) with an AF-S DX NIKKOR 18–55mm f/3.5–5.6G VR lens under the following test conditions: lens cycled from infinity to minimum range and one photograph taken at default settings once every 30 s; after photograph is taken, monitor is turned on for 4 s; tester waits for exposure meters to turn off after monitor is turned off; flash fired at full power once every other shot.

2. Measured at 20 °C/68 °F with an AF-S DX NIKKOR 18–55mm f/3.5–5.6G VR lens under the following test conditions: vibration reduction off, continuous release mode, focus mode set to AF-C, image quality set to JPEG basic, image size set to M (medium), white balance set to Auto, ISO sensitivity set to ISO 100, shutter speed 1/250 s, focus cycled from infinity to minimum range three times after shutter-release button has been pressed halfway for 3 s; six shots are then taken in succession and monitor turned on for 4 s and then turned off; cycle repeated once exposure meters have turned off.

The following can reduce battery life: using the monitor for extended periods; keeping the shutter-release button pressed halfway; repeated autofocus operations; taking NEF (RAW) photographs; slow shutter speeds; and using VR (vibration reduction) mode with VR lenses.

To ensure that you get the most from rechargeable Nikon EN-EL9a batteries:
- Keep the battery contacts clean. Soiled contacts can reduce battery performance.
- Use batteries immediately after charging. Batteries will lose their charge if left unused.
