SB-500

Ai AF Micro-Nikkor 60mm f/2.8D

Attach the IR Panel for Built-in Flash SG-3IR to the camera to block foreground light.

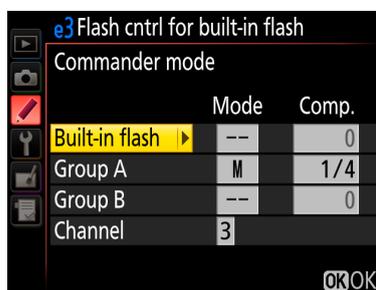

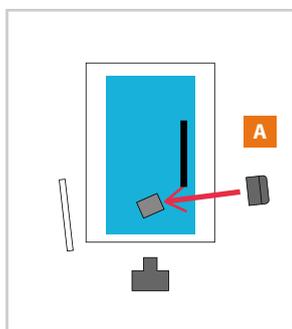

Use a reflector board\* to reflect the flash light and soften the shadows.  
\*White paper can be used instead.

Illuminate the subject from the right to achieve clear contrast.

Set the flash control mode of the built-in flash to "--" in commander mode menu.

Block part of the flash light with a piece of black paper to add depth to the photo by casting a shadow on the background.

Capture the details clearly without unnecessary reflections.

Shutter speed: 1/60 sec.

Aperture: f/11

ISO sensitivity: 100

Built-in flash: --

Group A: TTL -0.7

AF-S NIKKOR 24-120mm f/4G ED VR

Index

Block part of the LED light with a piece of black paper in order not to illuminate the background.

Illuminate the roof of the merry-go-round with the LED light.

Place the LED light at the back on the right to sharpen the outlines of the figures at the back.

Illuminate from the front left with the LED light to highlight the horse at the front.

Set the white balance to "Auto."

Use black paper rolled around the LED light to focus the light onto the figures at the back on the right.
